JOURNAL CLUB GUIDELINES

A journal club is a group of individuals who meet regularly to critically evaluate recent articles in the academic literature such as the scientific literature, medical literature. Journal clubs are usually organized around a defined subject in basic or applied research. Typically, each participant can voice their view relating to several questions such as the appropriateness of the research design.

Journal club helps to make the students become more familiar with the advanced literature in their new field of study. In addition, these journal clubs help to improve the students' skills of understanding and debating current topics of active interest in their field.

PURPOSE:

- To develop skills in research article analysis
- To improve communication skills
- To increase knowledge on topic of interest

GUIDELINES TO STUDENTS:

- a. The student should discuss the publications proposed (journal club topic) with the concerned guide allotted to them.
- b. The student should do survey of literature and collect a set of relevant publications.
- c. The student shall discuss (Group discussion) the article of journal club allotted to them in presence of their guide. Students are encouraged to read the relevant review of literature and to develop the understanding of the subject.
- d. Students should prepare summary report of the research article and submit to concerned guide.

NEUTRITIONAL COOCKIES: A TASTIER WAY FOR GOOD HEALTH

Miss. Vaishnavi Chitalkar & Miss Gauri Kulkarni

Abstract:

Neutraceuticals refers to a foodstuff that helps to provide medicinal benefits in addition to its nutritional value. It consist of food supplements, herbal product, probiotics & prebiotics. There are so many disorders caused due to deficiency of proteins, vitamins, calories and energy. In market there are so many such supplements are available but may form them contain high amount of steroids and sugars. It may cause adverse effect on health like muscle dystrophy.

Curcubita pepo is a plant from curcubicea family it is commonly known as Pumpkin. Its seed contains number of nutrients as well as it is a major source of proteins. Ragi floor rich with minerals such as calcium, magnesium and iron. Jaggary covers all disadvantages of sugar hence it is good for health. Ghee and milk are top dairy products rich with energy, fat, calcium content. Almond provides proteins, fats, carbohydrates.

The present study elaborate the herbal or natural protein rich formulation along with good nutritional values. The formulation will overcome the disadvantages of marketed formulation and helpful for the nutritional support.

Keywords: Almond, Ghee, Jaggery, Milk, Protein Deficiency, Pumpkin Seeds, Ragi.

FORMULATION OF HERBAL CHOCOLATE FOR ALOPECIA

Miss. Sharmin Tamboli & Miss. Radhika Sonawani

Abstract

Hair loss is a widespread problem among all genders, ages and ethnicity with both physical and psychological effects. Approximately 50% of women have visible hair loss by age of 60 while men tend to lose hair by the age of 50. Minoxidil based medications are available in market for male and female pattern hair loss which are used topically or in oral dosage forms with notable side effects which includes irritant and allergic dermatitis, pruritis, scalp irritation, sodium and fluid retention, etc. on prolonged use of this drug.

An attempt has been made to prepare herbal product based on traditional practices and ayurvedic remedies to solve this problem. The objective of this formulation is to design herbal chocolate with extracts of various plants which are beneficial in treatment of hair loss. As the drugs are incorporated within chocolate and drug is released from it, this is called as chocolate drug delivery system. Considering the general acknowledgement of chocolate, the essential target of this formulation are paediatrics and female patients. The herbal chocolate concentrates on improving impact along with pleasant taste with no reactions. It is effective, safe and notably cheaper than presently available chemical based hair loss treatments.

Keywords: Alopecia, Amla, Bhringraj, Fenugreek, Hair loss, Herbal Chocolate.

AVISHKAR-2023

SAY NO TO CRAMPS: THE HERBAL CHOCOLATES

Miss. Kattul Veena & Miss. Garje Sapna

Abstract:

Menstrual cramps happen because of contractions in the uterus or womb which is a muscle. If it contracts too strongly during menstruation it can press against nearby blood vessels. Due to low blood supply there is lack oxygen to the uterus. Lack of oxygen causes cramping and pain due to biochemical called as prostaglandin which is secreted in the lining of the uterus. The treatment includes reduction of the level of prostaglandins as it is high during menstruation. Pain which causes during menstruation cramps is compared with the pain occurs during heart attack through which a women have to go every month. The marketed NSAID's can relieve this pain but having side effects like hepatotoxicity, nephrotoxicity, etc. if taken regularly. So it can be overcome with the natural substituents.

Dark chocolate which is obtained from the seeds of plant *Theobroma cacao* belonging to family Malvaceae. This will help to reduce inflammation and period cramps naturally. Along with some other natural ingredients the pain can be reduced and also iron balance can be maintained naturally which occurs during menstruation.

Keywords: Period cramps, Iron deficiency, Vitamin C, Ginger, Oats, Dark chocolate

AVISHKAR-2023

MEDICATED CHEWING GUM: NO MORE HEARTBURN TO RUIN YOUR FUN

Miss. Nikita Aher & Miss. Gauri Ashtekar

Abstract:

Acidity, also called acid reflux, is a condition that is characterized by heartburn that is felt around the lower chest area. Spicy foods or large meals can also be the root of distress. This causes heartburn, which is the burning sensation a person feels from the acid that comes up from the stomach. Heartburn is the most recognizable symptom of acid reflux. It is the uncomfortable, burning sensation that occurs in the esophagus. A person will feel it behind the breastbone area. It tends to get worse when lying down or bending over. It can last for several hours and often worsens after eating food. The pain of heartburn may move up toward the neck and throat. Stomach fluid can reach the back of the throat in some cases, producing a bitter or sour taste.

The medicated chewing gum can help to neutralize the stomach acid and provide relief from heartburn. Chewing Gum works to reduce acid in the esophagus. The act of chewing can increase the saliva production, and the sodium bicarbonate which neutralize or decrease the acidity. Flavoring agents such as Ginger and Mint helps to soothe the digestive tract.

Keywords: Acidity, Chewing gum, Ginger, Heartburn, Honey, Sodium bicarbonate.

AVISHKAR -2023

POLYHERBAL TABLET FOR ELEVATED CREATININE LEVEL

Abstract :

Creatinine is derived from creatine which assess kidney function. However, its levels are significantly affected by nutritional status, muscle mass, age, and sex of an individual. The effect of creatinine levels on human physiology is not completely understood.

Kidney diseases are the major cause of death and nephrotoxicity of drugs is a crucial factor inducing kidney injuries. Due to this we use nephroprotective agents. Plants are a wide source of nephroprotective substances and have beneficial effects on different levels of the physiological pathways which lead to kidney damage. In traditional medicines, plants are used as antioxidants, anti-inflammatories, diuretics, and anticancer agents, etc. The present work reviewed the plants with a beneficial effect on kidney diseases.

Keywords: creatinine, antioxidant, anti-inflammatory, Bhindi (antioxidant), Chronic kidney disease, haemodialysis, etc.

Formulation and Evaluation of Alverine Citrate Loaded Polymeric Nanoparticles for Oral Delivery

ABSTRACT:

The aim of the present study was to formulate and evaluate polymeric nanoparticles of Alverine Citrate for oral administration. Alverine Citrate was selected as a suitable drug for polymeric nanoparticles due to its low solubility, low bioavailability, and high frequency of administration. The nano-precipitation method was used to prepare nanoparticles to avoid chlorinated solvents and surfactants to prevent their toxic effect on the body. Alverine Citrate polymeric nanoparticles were prepared using hydrophilic polymers such as chitosan and HPMC K100M. The prepared formulations were then characterized for particle size, polydispersity index, zeta potential, loading efficiency, encapsulation efficiency, and drug-excipient compatibility.

**Atomization of Tablet Punching Machine Using Arduino UNO
microcontroller-based Alcohol Detector Device with Automatic Machine
Shutdown.**

ABSTRACT

Pharmaceutical Industries run on two major resources, machines, and labour. Machines need to be operated carefully since one mistake may lead to injuries, loss of life and business. While using tablet press machines highest level of accuracy needed as content uniformity of prepared dosage forms may affect the batch status and patient life as well. Arduino UNO microcontroller board based automated system to detect alcohol consumption of factory workers. Use a microcontroller-based circuit that consists of alcohol sensor interfaced with it. The alcohol sensor can sense the alcohol and it goes into alerting mode and shut downs machine.

Keywords: Machines, alcohol, accuracy, microcontroller, alerting system.

Novel Bionanocomposite for Food Packaging Applications

Ashok Anil Chopane, Sunita Maruti Chandrabhane

Nanotechnology is considering an important tool for the improvement of advanced materials. The universal nanotechnology associated to food packaging was US\$7.13 billion in 2022, which has been predictable to at about 12% compound annually enlargement rate. Through this global tendency, it is predictable that nanotechnology will offer the main drive in the progress of novel packaging applications systems for satisfying consumer's requirements. Foods are prone to contamination by spoilage and pathogenic microorganisms that can increase food waste, as well as increasing the risk of foodborne illness and death. Hence food packaging carries on growing in respond to the improvement of nanotechnology and material, accompanied by the changing consumers' request. Nowadays international market, packaging not only is important to facilitate real supply in addition to conservation of food products, but also to simplify their end-use suitability and communication at the consumer levels. Packaging offers control and protects food products over distribution and storage from outside and inner disapproving conditions, for instance, microorganism, gases, water vapor, dust, and mechanical shock. Therefore, there is an urgent need of such bionanocomposites based nanomaterials that will be used to improve the microbial, thermal, mechanical and gas barrier properties without hindering their biodegradable and non-toxic characters.

Subject : Regarding sanctioning of Expenses for Industrial Visit of Final Year B.Pharmacy Students.

Respected Sir,

With reference to the above cited subject, I would like to bring in your kind notice that as a part of curriculum we have to organized Industrial Visit for Final Year B.Pharmacy students at **Genom Biotech Pvt Ltd, Sinnar, Nashik.** we have to pay visit charges of Rs. 100 per student to industry. The total no of students would be 75 so kindly approve the amount $100 \times 75 = 7500$

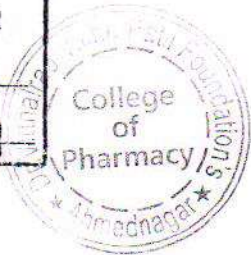

Sir, this is for your kind information and necessary approval. Kindly do needful.

Thanking you,

Subject : Regarding permission for Industrial visit.

Respected Sir,

With mentioned above cited subject, I would like to bring in your kind notice that, Dr. Vithalrao Vikhe Patil Foundation offers education in the field of Medical, Engineering, Pharmacy, Management, Agriculture, Nursing, Physiotherapy, Industrial Training Institute and CBSE School.

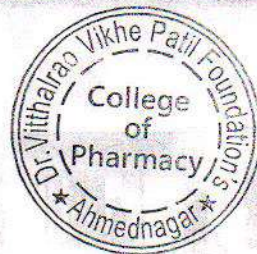

Dr. Vithalrao Vikhe Patil Foundation's College of Pharmacy is established in 1994. Which offers B.Pharmacy course, M.Pharmacy course in four specialization Pharmaceutical Chemistry, Pharmaceutical Quality Assurance, Pharmacology & Pharmaceutics, Pharm. D. and Ph.D. Research centre in Pharmacy. The College is accredited by National Assessment and Accreditation Council (NAAC) with Grade 'A' for Cycle 2, we are affiliated to Savitribai Phule Pune University, Pune, approved by P.C.I., New Delhi and recognized by U.G.C. under section 2 (f) & 12 (b).

INDUSTRIAL VISIT REPORT OF PADMASHREE DR.
VITTALRAO VIKHE PATIL FONDATION'S COLLEGE OF
PHARMACY AHMEDNAGAR. (THIRDYEAR B.PHARMACY
2023-24)

Objectives :

The objectives of the visit in pharmacy is to expose students to modern technologies and equipment used in pharmaceutical production, enabling us to witness advancements in research and development . This experience can enhance their understanding of industry trends and contribute to their academic and professional growth .

Introduction :

This report describes about the visit how all this happened from starting to end . All this started with a beautiful journey and ended with a lot of fun , knowledge , enjoyment , experiences .

First of all, we have told to come at exact 6:30 am in the morning on the date 1/1/2024 . We arrived in the morning at the college . All assembled there in the morning . There were two buses each for girls and the boys .About 30 students in each bus . The college staff Mr. Thange Sir , Mr. Barkade Sir ,Mr. Kakde Sir ,Mrs.Manche Mam ,Ms.Jaggi Mam were present they're with us. Sir had taken the attendance of all the students for assurance . The journey started, we were enjoying with dances , songs . We have started the journey at exact 7:30 am in the morning we reached at the company premises at exact 11:30 am .When we reached their professor Mr. Thange Sir told us to divide into two groups , 30 students in each group . The company's guide had carried each group with him . one group was taken to visit the hay go down and the other things while the other one on taken to the air supplies and the water chambers . We were taken at first to the airways . The company premises was very neat and

clean . The maintenance of hygiene and the other things such as transport facilities were maintained properly .The air ways that supplies the air to the sterilized room in the industry were of high efficiency . It generally includes about 4-5 filters of different capacities to filter the air generally . The air which is supplied to the manufacturing area is 15-16% recycled so as to maintain the oxygen level in the area for the comfortability of the workers generally . later on, we moved to the water supplying chamber of the company . As the company produces the product which is an antisera , the water provided should be properly sterilized generally . the industry was providing highly filtered and properly cleaned water for the various manufacturing processes for the product . The water needed for the company for the reconstitution purpose of the product in imported from the foreign countries and stored neatly in the proper storage facilities of the industry . The cleanliness of the equipment's that were in the use for variety of purposes were of good quality as per the guidelines .There were a separate department for the engineers to have a look in any difficulty of equipment's in that particular processing area . further we moved to the hay go down . The hay godown was the area that was specialized maintained for the purpose of sheltering the horses . the hay godown generally contains horses that are imported, experimented, bleeped, and traded with saline solutions . The horses that were infected by any type of infections were isolated from the healthy horses . The horses that were imported from north south and other states were of the age about 5 years and that can be utilized up to 15 years age. Later on, we moved towards the bleeding chamber . The bleeding chamber was such a chamber where the bleeding of the horses is done . The horses that were injected by the venom and had formed the antibodies were bleeped there. At first when the horses are injected by the venom of snake / scorpions these horses are very sensitive towards the venom they formed the ability to face the venom and form the antibodies . These antibodies are present mainly in the plasma of the horses blood . To isolate these antibodies the blood should be separated first and for this purpose the bleeding of the horses is done . The blood that isolated from the horse body is firstly centrifuged and the plasma is separated at first . Then from this plasma the antibodies are separated . These antibodies are present in the fluid form these are then converted into solid form by the process of lyophilization . So, we moved towards the lyophilizing chamber these chamber was containing lyophilizing machines and the filling was also done in the same place .Lyophilization is mainly

done to preserve the product for longer duration . The lyophilized product can be preserved up to 4 years instead the un-lyophilized product could only store for 2 years . as the product is ready to get inspected by the quality department .it later on moved to the sterility testing . The proper procedure was followed by the company there were small animal house for the animals to be stored for the sterility test . The animals that were used for the sterility testing were guinea pig and the mice . Finally, under all inspected , observed conditions the product is ready to import in the foreign countries generally . Here's how we finished the industrial visit . it's almost 1 pm of the afternoon . We moved towards the buses and started our return journey . We moved to the ozar's Ganpati temple . we take darshan and returned on our root . Near the Alephata we had our lunch fulfilled our stomach and then started to continue our returned journey . As the visit was full of joy , experiences , and the practices of our knowledge. we had learned a lot of things from this visit I. I grateful to the training and the Placement Department , the teacher staff and the respected Principle Sir Dr. P.Y.Pawar sir .
